Game Overview

Game Name is a 2d pixel platformer side-scroller. Where the player will control The spider who takes the valuable Ceilum crystal. While trying to outrun Big Fish O' Frog, the main enemy, the player will be able to pick up webbing from old webs to attack Bif FIsh O' Frog with, affecting his speed.

Deep underground, below the ruins of an abanonded civilization, lives The Spider who weaves with all his might. He spends his days in the dirt and stone tunnels crafting strong and sticky webs, to build his home and feed his stomach. While evading Big Fish O' Frog, The Spider will have to manuver through tunnels without getting caught or falling onto the deadly spikes below to escape with his crystal. Will he be able to spin his best web yet or get crushed under the pressure?

Style Overview

The artstyle for Game Name is one of a dark, gothic, desaturated aesthetic. Simple in color and immersive in atmosphere. The environment of unsaturated purple hues creates a cold climate in the background of the game. The only true warmth from the environment comes from the sandy brown stone littering the landscape.

The characters have two distinct silhouettes each representing their personalities and goals. The Spider is a dark purple, almost black in color, as to stand out from the murky scenery. It also has more curves and rounded edges suggesting the softness, and approachability of our protagonist. Big Fish O' Frog is a fish/ frog hybrid animal shown in his size and deep red color. He is also curved but more so in the way to express power and consumption.

RESEARCH

Characters

Carrion: Carrion has a similar color scheme to Big Frog O'Fish

There was not many references for bug/spider-like creatures.

Environment

Lava Caves:

- The color palette of these assets are what the game is going for in terms of value and detail in background elements.

Music

Castlevania:

- Castlevania is a perfect example of 8-bit music that is upbeat, tense, and sets that eerie tone. It is engaging and fast-faced motivating movement and action.

MOODBOARD

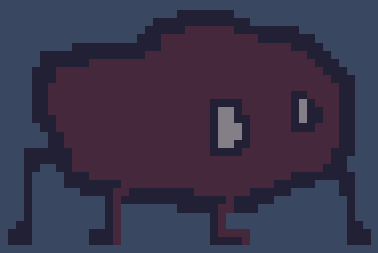

Inspirations:

- The first cluster of photos (1, 7, 8, 9) are for the enemy, Big Fish O' Frog. He should take up a good portion of the screen in comparison to the character. He should take color themes from 1 and stay in a 2d pixel style 7.
- The second cluster (2, 4, 5, 6) is for The Spider. His general

appearence should be slightly goofy while still maintaining a 2d pixel style with 6 and 4. 2 and 4 are used for the aesthic of the type of spider it will be, a Daddy Long-legs.

- The third cluster (3, 10, 11, 12) is for the environments overall style. 10 represents the other all style of the cave environment. 3, 11, and 12 represent the syle of pixel art shading the game should aim for.
- The final cluster (13, 14, 15) is for the menu style guide. 14 represents the kind of tile, shading and material the background should utilize. While 15 represents the aesthetic of the main menu and 13 displays how the buttons in the menu should appear.
